

WHAT IS CLAIMED IS:

1. A descending device hanging structure adapted to hang a descending device on a window for helping a person to escape from a danger, the descending
5 device hanging structure comprising:

a first rod member for the hanging of the safety hook of a descending device;

a second rod member for supporting the safety hook of the descending device to be hung to said first rod member; and

a plurality of fastening devices respectively provided at said first rod
10 member and adapted to secure said second rod member to said first rod member after said first rod member and said second rod member have been respectively transversely stopped at inner and outer sides of a window.

2. The descending device hanging structure as claimed in claim 1, wherein said fastening devices are belts of hook and loop materials.

15 3. The descending device hanging structure as claimed in claim 1, wherein said fastening devices are tie ropes.
